# Whole Fractions

A fraction shows an equal number of parts. A fraction is used to show an amount smaller than 1. But a fraction can show a whole amount, too. It can show the number 1.

**Example:** Count the fraction parts.

So,  $\frac{4}{4}$  is the same as 1 whole, or  $\frac{4}{4} = 1$ .

### Directions

**Write a fraction to describe each shaded part.**

### Directions

**Write a fraction that names the shaded part.**

# Whole Fractions

## Answer Key

---

1.  $\frac{1}{3}, \frac{2}{3}, \frac{3}{3}$

2.  $\frac{1}{6}, \frac{2}{6}, \frac{3}{6}, \frac{4}{6}, \frac{5}{6}, \frac{6}{6}$

3.  $\frac{1}{5}, \frac{2}{5}, \frac{3}{5}, \frac{4}{5}, \frac{5}{5}$

4.  $\frac{6}{6}$

5.  $\frac{9}{9}$

6.  $\frac{12}{12}$
